## Reinsurance Module Description

Integrated reinsurance module shared by all profit centers and their respective writing / booking systems. This required flexibility on the part of the product to support common functions and views in order to minimize complexity for writing all of AIG.

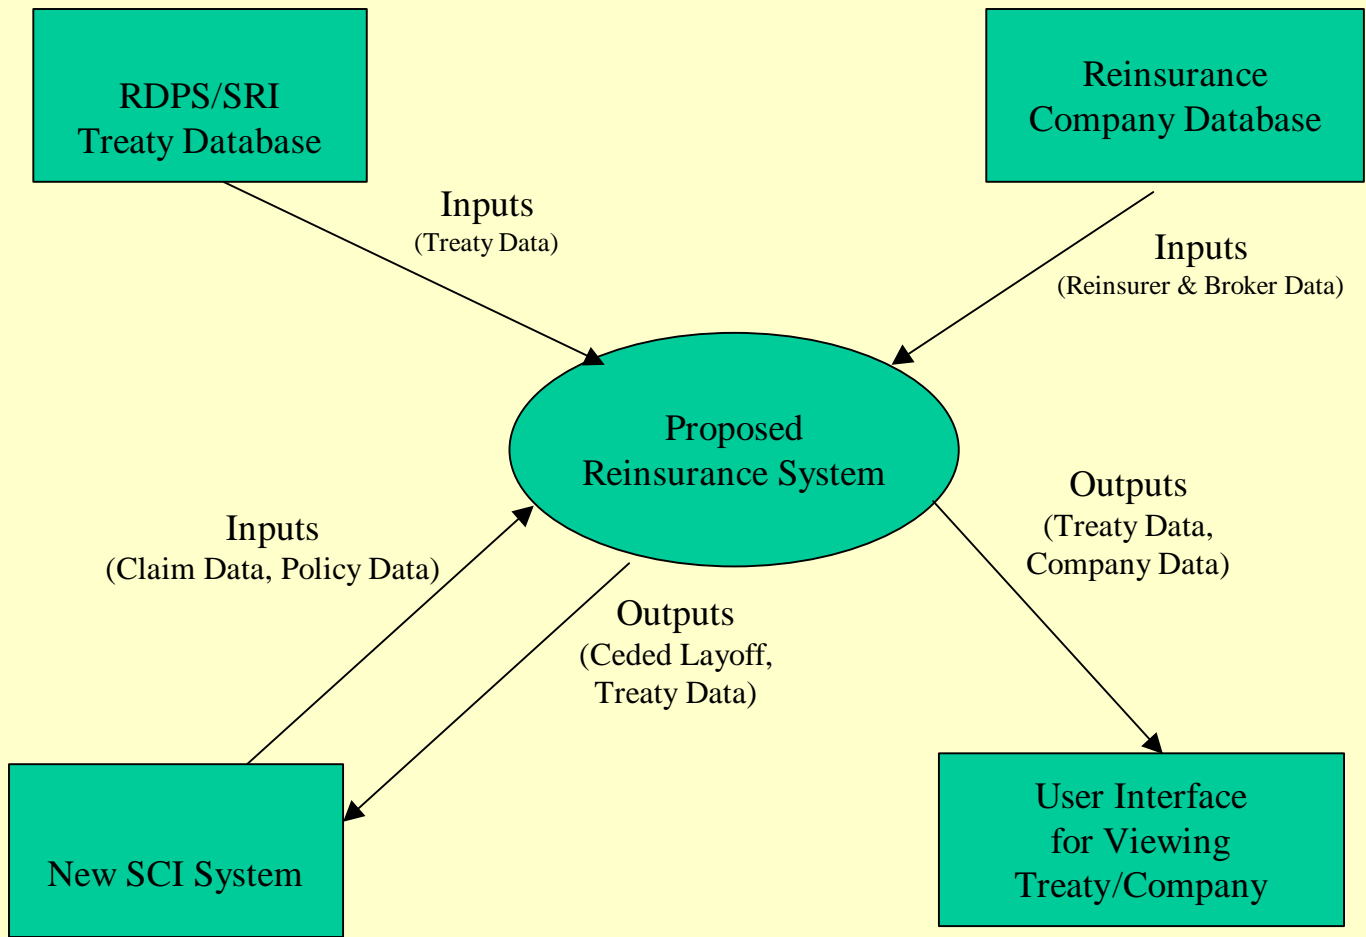

Integrated Reinsurance Module has been designed to integrate with each of the underwriting systems, which will improve the process of analyzing and pricing reinsurance, since the module:

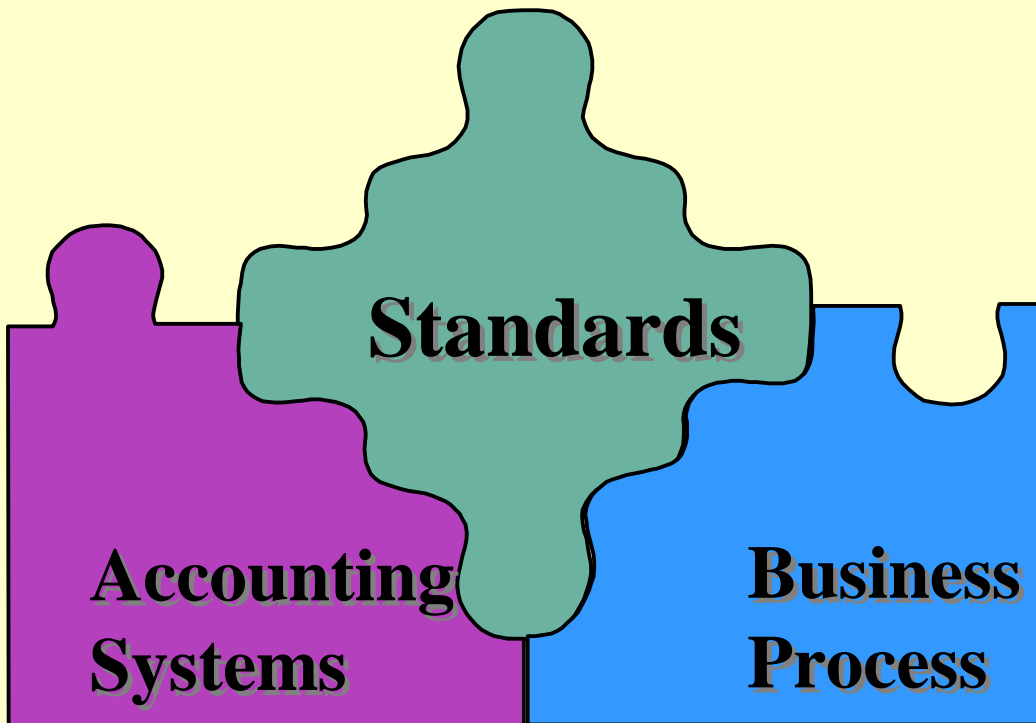

- ◆ Based on treaty rules, the module systemically applies treaty reinsurance
- ◆ Provides automation of treaty cession premium.
- ◆ Facilitates the placement, pricing, negotiation and booking of facultative reinsurance “eReinsure”
- ◆ Provides the underwriter a systemic means of analyzing gross/cede/net in the “quote” phase
