CSC DELIVERS REAL-TIME AGENCY-CARRIER SOLUTIONS USING CSC'S AGENCY CONNECT AND IVANS TRANSFORMATION STATION™

Carriers to Benefit from Easy, Proven Implementation

ACORD LOMA Conference, LAS VEGAS, Nev., May 24, 2004 – IVANS, Inc. and Computer Sciences Corporation (NYSE: CSC) announced today the availability of a real-time agency-carrier interface using CSC's Agency Connect with IVANS Transformation Station™.

"CSC and IVANS have worked together to ensure that carriers and managing general agents (MGAs) can quickly roll out real-time transactions," said Janice Sheffield, divisional vice president, IVANS. "We look forward to working with CSC to identify and implement the hundreds of interface opportunities with our mutual clients."

"CSC will immediately make available service transactions, such as billing, claims and policy inquiry, and expand to the full range of transactions available," according to Steve Hobson, program manager for the P&C Insurance division of CSC's Financial Services Group. "Agency Connect fully supports ACORD XML. CSC and IVANS have built a working prototype, starting in Applied's The Agency Manager (TAM), through Transformation Station, to CSC's Agency Connect, and back to TAM."

According to Phil McCain, IT eBusiness manager, Frankenmuth Insurance, "As an active CSC client, we applaud this initiative, which will speed the implementation of real-time transactions and Transformation Station across a large number of carriers."

"CSC just removed a lot of barriers to truly efficient agency-company interface," said Doug Johnston, executive vice president, Interface Services, of Applied Systems, Inc. "This is a huge win for insurance agencies and carriers, and for the use of ACORD XML and the real-time Web services movement in general."

Transformation Station is the leading Internet-managed data exchange using Web services and ACORD XML to enable real-time transactions between insurance carriers, independent agents, brokers and MGAs. Thirty-nine insurance carriers now participate in Transformation Station and are able to reach nine different agency vendor platforms.

CSC's Agency Connect is designed to help carriers to provide real-time business transactions via Web services. Interfaces to these business transactions use industry standard ACORD XML and can invoke business functions in back-end policy processing systems. Transactions such as inquiry, first notice of loss, and request for rate can be provided seamlessly to requesting entities, such as agency systems. With other types of transactions, such as full policy applications, underwriting and issue, Agency Connect can use both the screens and services of an agency system along with a carrier's browser-based applications, to give agents an enhanced or extended blended workflow for processing business.
